

DokuWiki customizations for FIXES

Changelog setting

Our setting for changelog under [FIXES changelog](#) looks like this:

```
<WRAP >
{{changes>count = 1000 & type = create, edit, minor & render =
list(dayheaders, signature, summary)}}
</WRAP>
```

Change height of editor window

To set a custom default height of the editor windows of [DokuWiki](#) create a file named `userscript.js` under `conf/` of the [DokuWiki](#) base directory. Then add this content:

```
jQuery(function() {
    jQuery('#wiki__text').height('600px');
});
```

Remind to set the accurate permissions on this file so that the `httpd` can read it! Otherwise your custom set default height will not work!

URL-Rewriting

To make the URL look more fancy, you can use URL-rewriting. Our configuration for this wiki looks like this:

1. Edit `conf/local.php` and add the following line:

```
$conf['userrewrite'] = 1;
```

`userrewrite` can have this values:

Value	Description	Example URL
0	No URL-rewriting. Default setting	http://example.com/dokuwiki/doku.php?id=wiki:syntax
1	Rewriting will be done by the webserver	http://example.com/dokuwiki/wiki:syntax
2	Rewriting will be done by DokuWiki	http://example.com/dokuwiki/doku.php/wiki:syntax

2. Then edit your `apache2/httpd` config (`httpd.conf` or `apache2.conf`) to load the required module:

httpd.conf: Add this line:

```
LoadModule rewrite_module modules/mod_rewrite.so
```

apache2.conf: Execute this command to enable the module:

```
a2enmod rewrite
```

3. Edit your virtual host config: Change the line beginning with `AllowOverride` to `AllowOverride All`.

4. Then copy the `.htaccess.dist` from the dokuwiki base directory to `.htaccess`. Then uncomment the following lines:

```
RewriteEngine on

RewriteRule ^_media/(.*) lib/exe/fetch.php?media=$1 [QSA,L]
RewriteRule ^_detail/(.*) lib/exe/detail.php?media=$1 [QSA,L]
RewriteRule ^_export/([^/]+)/(.*) doku.php?do=export_<math>\$1\&id=\$2 [QSA,L]
RewriteRule ^\$ doku.php [L]
RewriteCond %{REQUEST_FILENAME} !-f
RewriteCond %{REQUEST_FILENAME} !-d
RewriteRule (.*<math> doku.php?id=\$1 [QSA,L]
RewriteRule ^index.php\$ doku.php
```

5. Finally restart apache or httpd.

Optional To make Dokuwiki use slashes instead of colons for separating the namespaces in the url, activate the configuration setting `useslash` in the Advanced-section of the Dokuwiki config:

[useslash](#)

Use slash as namespace separator in URLs
