DokuWiki customizations for FIXES

Changelog setting

Our setting for changelog under FIXES changelog looks like this:

```
<WRAP >
{{changes>count = 1000 & type = create, edit, minor & render =
list(dayheaders, signature, summary)}}
</WRAP>
```

Change height of editor window

To set a custom default height of the editor windows of DokuWiki create a file named userscript.js under conf/ of the DokuWiki base directory. Then add this content:

```
jQuery(function() {
    jQuery('#wiki__text').height('600px');
});
```

> Remind to set the accurate permissions on this file so that the httpd can read it! Otherwise your custom set default height will not work!

URL-Rewriting

To make the URL look more fancy, you can use URL-rewriting. Our configuration for this wiki looks like this:

1. Edit conf/local.php and add the following line:

```
$conf['userewrite'] = 1;
```

userewrite can have this values:

Value	Description	Example URL
0	Kein URL Rewriting. Dies ist die Standardeinstellung.	http://example.com/dokuwiki/doku.php?id=wiki:syntax
1	Rewriting wird vom Webserver durchgeführt.	http://example.com/dokuwiki/wiki:syntax
2	Rewriting wird von DokuWiki durchgeführt.	http://example.com/dokuwiki/doku.php/wiki:syntax

2. Then edit your apache2/httpd config (httpd.conf or apache2.conf) to load the required

module:

httpd.conf: Add this line:

```
LoadModule rewrite_module modules/mod_rewrite.so
```

apache2.conf: Execute this command to enable the module:

```
a2enmod rewrite
```

3. Edit your virtual host config: Change the line beginning with AllowOverride to AllowOverride All.

4. Then copy the `.htaccess.dist` from the dokuwiki base directory to `.htaccess`. Then uncomment the following lines:

```
RewriteEngine on

RewriteRule ^_media/(.*)          lib/exe/fetch.php?media=$1  [QSA,L]
RewriteRule ^_detail/(.*)         lib/exe/detail.php?media=$1  [QSA,L]
RewriteRule ^_export/([^/]+)/(.*) doku.php?do=export_$1&id=$2  [QSA,L]
RewriteRule ^$                    doku.php  [L]
RewriteCond %{REQUEST_FILENAME}   !-f
RewriteCond %{REQUEST_FILENAME}   !-d
RewriteRule (.*)                  doku.php?id=$1  [QSA,L]
RewriteRule ^index.php$           doku.php
```

5. Finally restart apache or httpd.
