

APT

Disable new notifications from listchanges

To disable the sending of listchanges information from APT run the following command:

```
dpkg-reconfigure apt-listchanges
```

Then select None as Method to be used to display changes. Confirm all other requests with the default selected value.

Disable debsecan (Debian Security) notifications

If enabled the debsecan-package will send a daily email with all vulnerabilities in installed packages on the system. To disable remove the MAILTO and the cron entry from the file `/etc/cron.d/debsecan` by commenting them out.
