Mount CIFS/SMB-Share static

This quick guide shows how to mount a CIFS/SMB-Share across over reboots on Debian-based installations.

1. Install the package `cifs-utils`:

```
sudo apt install cifs-utils
```

2. Append this to your `/etc/fstab` file:

```
//<path-to-share> <path-to-mountpoint> cifs
credentials=/root/smbcredentials,uid=1000 0 0
```

3. Store your login credentials under `/root/smbcredentials`, therefore create this file and insert this:

```
user=<username>
password=<password>
```

4. Mount your share manually or reboot your system:

```
sudo mount -a
```

Now your share will be mounted across reboots!
