

Waterfox on Linux (Install/Settings)

Waterfox Installation from Repository (Debian, Fedora, CentOS)

Although there are no official Debian repositories for Waterfox, it can be installed from a repository with APT.

Repository: openSUSE.org

Therefore use this commands:

```
sudo apt update && sudo apt upgrade -y
```

```
sudo apt install software-properties-common apt-transport-https curl -y
```

Quick install:

Just run the following command to get the repository key and install it:

```
curl -fsSL
https://download.opensuse.org/repositories/home:hawkeye116477:waterfox/xUbuntu_24.04/Release.key | sudo gpg --dearmor | sudo tee
/etc/apt/trusted.gpg.d/home_hawkeye116477_waterfox.gpg > /dev/null
```

Then add the repository to the sources lists:

```
echo 'deb
http://download.opensuse.org/repositories/home:/hawkeye116477:/waterfox/xUbuntu_24.04/' | sudo tee
/etc/apt/sources.list.d/home:hawkeye116477:waterfox.list
```

Longer, bit outdated way:

```
wget
https://download.opensuse.org/repositories/home:hawkeye116477:waterfox/Debian_11/Release.key
```

Replace *Debian_11* with your distribution, e.g. *Debian_12*. Therefore have a look at download.opensuse.org/repositories

```
gpg --dearmor Release.key && cat Release.key.gpg | sudo tee
/etc/apt/trusted.gpg.d/home_hawkeye116477_waterfox.gpg > /dev/null
```

```
rm Release.key*
```

```
echo 'deb
http://download.opensuse.org/repositories/home:/hawkeye116477:/waterfox/Debi
```

20:16

```
an_11/ /' | sudo tee  
/etc/apt/sources.list.d/home:hawkeye116477:waterfox.list
```

```
sudo apt update
```

```
sudo apt install fonts-lyx ffmpeg -y waterfox-g-kde
```

Waterfox Installation via flathub

Simply run:

```
flatpak install flathub net.waterfox.waterfox
```

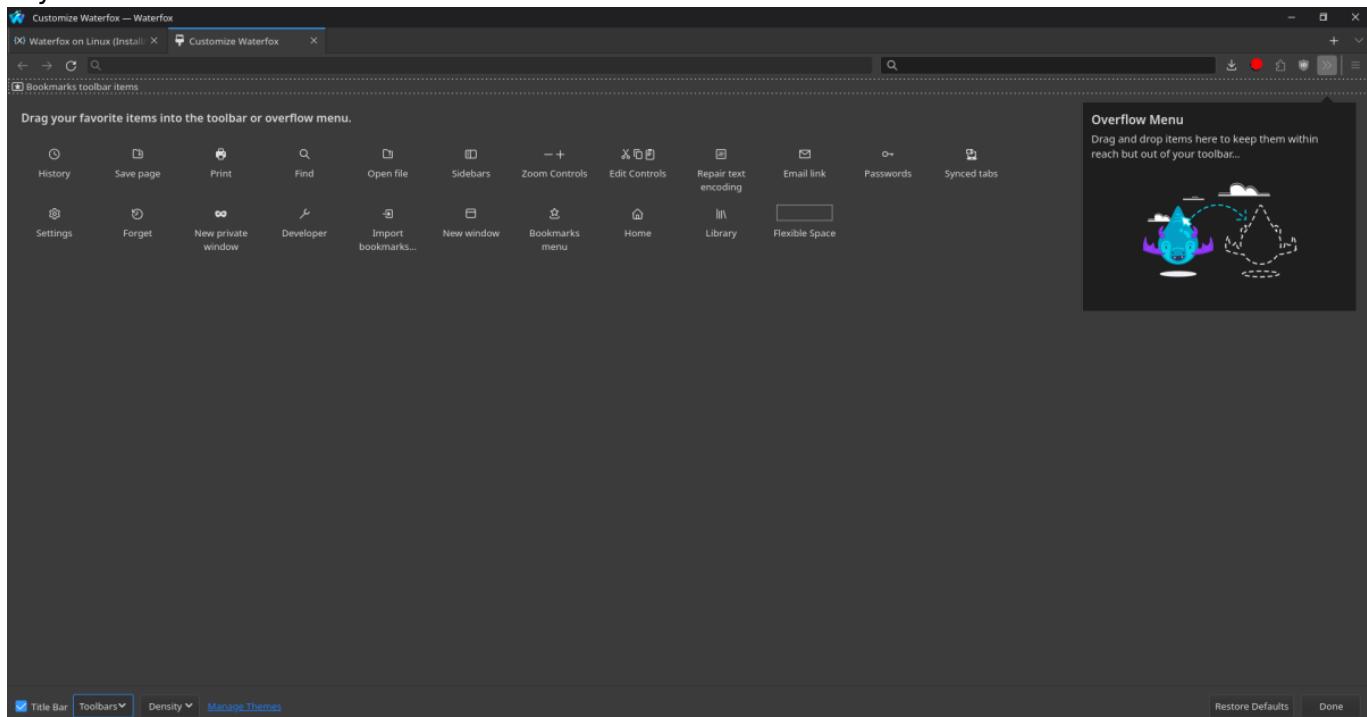

Disclaimer: packages might be a bit outdated when sourcing from flathub!

Waterfox system's titlebar on Plasma

When installing [Waterfox](#) on a KDE/Plasma environment, it could be that Waterfox's default setting is to use a custom title bar like this:

In some configurations this can look very ugly like above. But it's possible to change this, therefore navigate to More tools > Customize toolbar and tick the check in the lower left corner that says Title Bar:

Finally your Waterfox should look like this:

Sourced from askvg.de - Firefox Settings

Fix missing fonts

It might be, that some webpages will be displayed in Times New Roman font, to fix that install the missing fonts by just installing the packages `ttf-mscorefonts-installer` and `fonts-lyx`:

```
sudo apt install ttf-mscorefonts-installer fonts-lyx ffmpeg
```

The package `ffmpeg` will additionally make video and audio output possible.
